Type: ROUTINE INSPECTION
Date: Aug-25-2015

3.125 (a)

FACILITIES, GENERAL

*The metal door frame at the front of the bear enclosure is excessively rusted at the bottom. The frame is flaking and eroding in the rusted area. Structural integrity of the door and enclosure and animal containment may eventually be impacted if the deterioration continues.

*One of the resting surfaces/shelters in the bear enclosure is constructed of wood panels attached to a metal surface at the bottom. Some of the panels have been removed by the bears and pieces of broken metal and nails used to secure the wood are now visible, potentially accessible to the animals and could cause injury.

Housing facilities must be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals. The described compromised areas should be repaired or replaced.

Correct by: September 26, 2015.
